Travis County Map Book from the 2010 Census

Travis County Health and Human Services & Veterans Service | Research & Planning Division

Volume I: ZIP Code Tabulation Areas

Purpose of the Travis County Map Book

This map book is intended to provide a visual illustration of the Travis County community by ZIP code tabulation area, using selected demographic data from the 2010 Census. It addresses the following characteristics:

- Basic population counts
- Race and Hispanic origin
- Age
- Selected characteristics for cities and villages

We hope this information is helpful in local efforts to understand our community, improve programs, influence funding decisions, and shape local policies. We encourage readers to borrow and cite this material.

About the 2010 Census

The U.S. Census Bureau produces a large number of data products and administers a wide variety of surveys. Perhaps the most well-known is the Decennial Census, which surveys every household in America once every ten years in order to provide Congress with an official count of the entire U.S. population.

Prior to 2010, the Decennial Census form was very long, covering a wide variety and great depth of information. However, it was redesigned in 2010 to contain only 10 simple questions related to basic population counts and demographic characteristics, such as sex, age, race, Hispanic origin, household size, and homeowner status. (The more descriptive social, economic and housing characteristics formerly collected by the Decennial Census can now be found in another U.S. Census Bureau data product, the American Community Survey.)

Because the Decennial Census surveys every household in the U.S. at the same time, it is said to describe *100-percent characteristics*. For this reason, the Decennial Census is considered a highly reliable source of data.

A Note on Geography: ZIP Codes

The primary geography used in this map book is the *ZIP code tabulation area*. This geography is slightly different from the U.S. Postal Service ZIP codes used for mail service, with which the public is likely more familiar.

There is no correlation between ZIP codes, which are maintained by the U.S. Postal Service, and geographies used by the U.S. Census Bureau to tabulate census data (such as state, county, census tract, and block group). U.S. Census Bureau geographies are relatively stable over time, while U.S. Postal Service ZIP codes are designed to meet the day-to-day operational needs of mail service, tend to change more frequently, and often cross the boundaries of Census Bureau geographies. The fact that ZIP codes are merely networks of streets and not required to be polygons or cover contiguous areas also makes them difficult to map.

To overcome difficulties in defining the land area covered by each U.S. Postal Service ZIP code, the U.S. Census Bureau created the *ZIP code tabulation area* as a statistical geographic entity. ZIP code tabulation areas are generalized representations of U.S. Postal Service ZIP code service areas. They are built by aggregating census blocks, whose addresses use a given ZIP code; each resulting ZIP code tabulation area is then assigned the most frequently occurring ZIP code. Thus they represent the most frequently occurring five-digit ZIP code found in a given area.

In addition to ZIP code tabulation area data, this map book also contains information on cities and villages within Travis County. The U.S. Census Bureau provides census data for cities and villages recognized as formally incorporated areas. Some commonly recognized but not formally incorporated areas (such as Del Valle and Oak Hill) do not have U.S. Census Bureau data available, and thus are not reflected on the map as distinct geographies.

Limitations

Although the Decennial Census describes 100-percent characteristics, some populations remain hard to reach through traditional survey methods, and not everyone is captured in the data. If certain individuals do not respond to the survey, the strength of the findings will be diminished. Additionally, those who respond to surveys may possess certain traits that skew the results different than if everyone responds.

Some areas are excluded from ZIP code tabulation areas, such as water bodies, unpopulated areas, and sparsely populated areas. As a result, ZIP code tabulation areas do not cover the full extent of the nation.

Because ZIP code tabulation areas cross county boundaries, these maps only partially display some ZIP codes; however, the data represented is reflective of the entire ZIP code tabulation area, including the land areas not shown on the map.

Maps and data tables that show both 2000 and 2010 data are intended to provide a broad, community-wide perspective for understanding demographic change in Travis County. Please use caution when making comparisons across time periods for individual geographies. ZIP code boundaries change frequently, and boundaries for incorporated entities change over time as new areas are annexed into cities and villages.

Acknowledgements

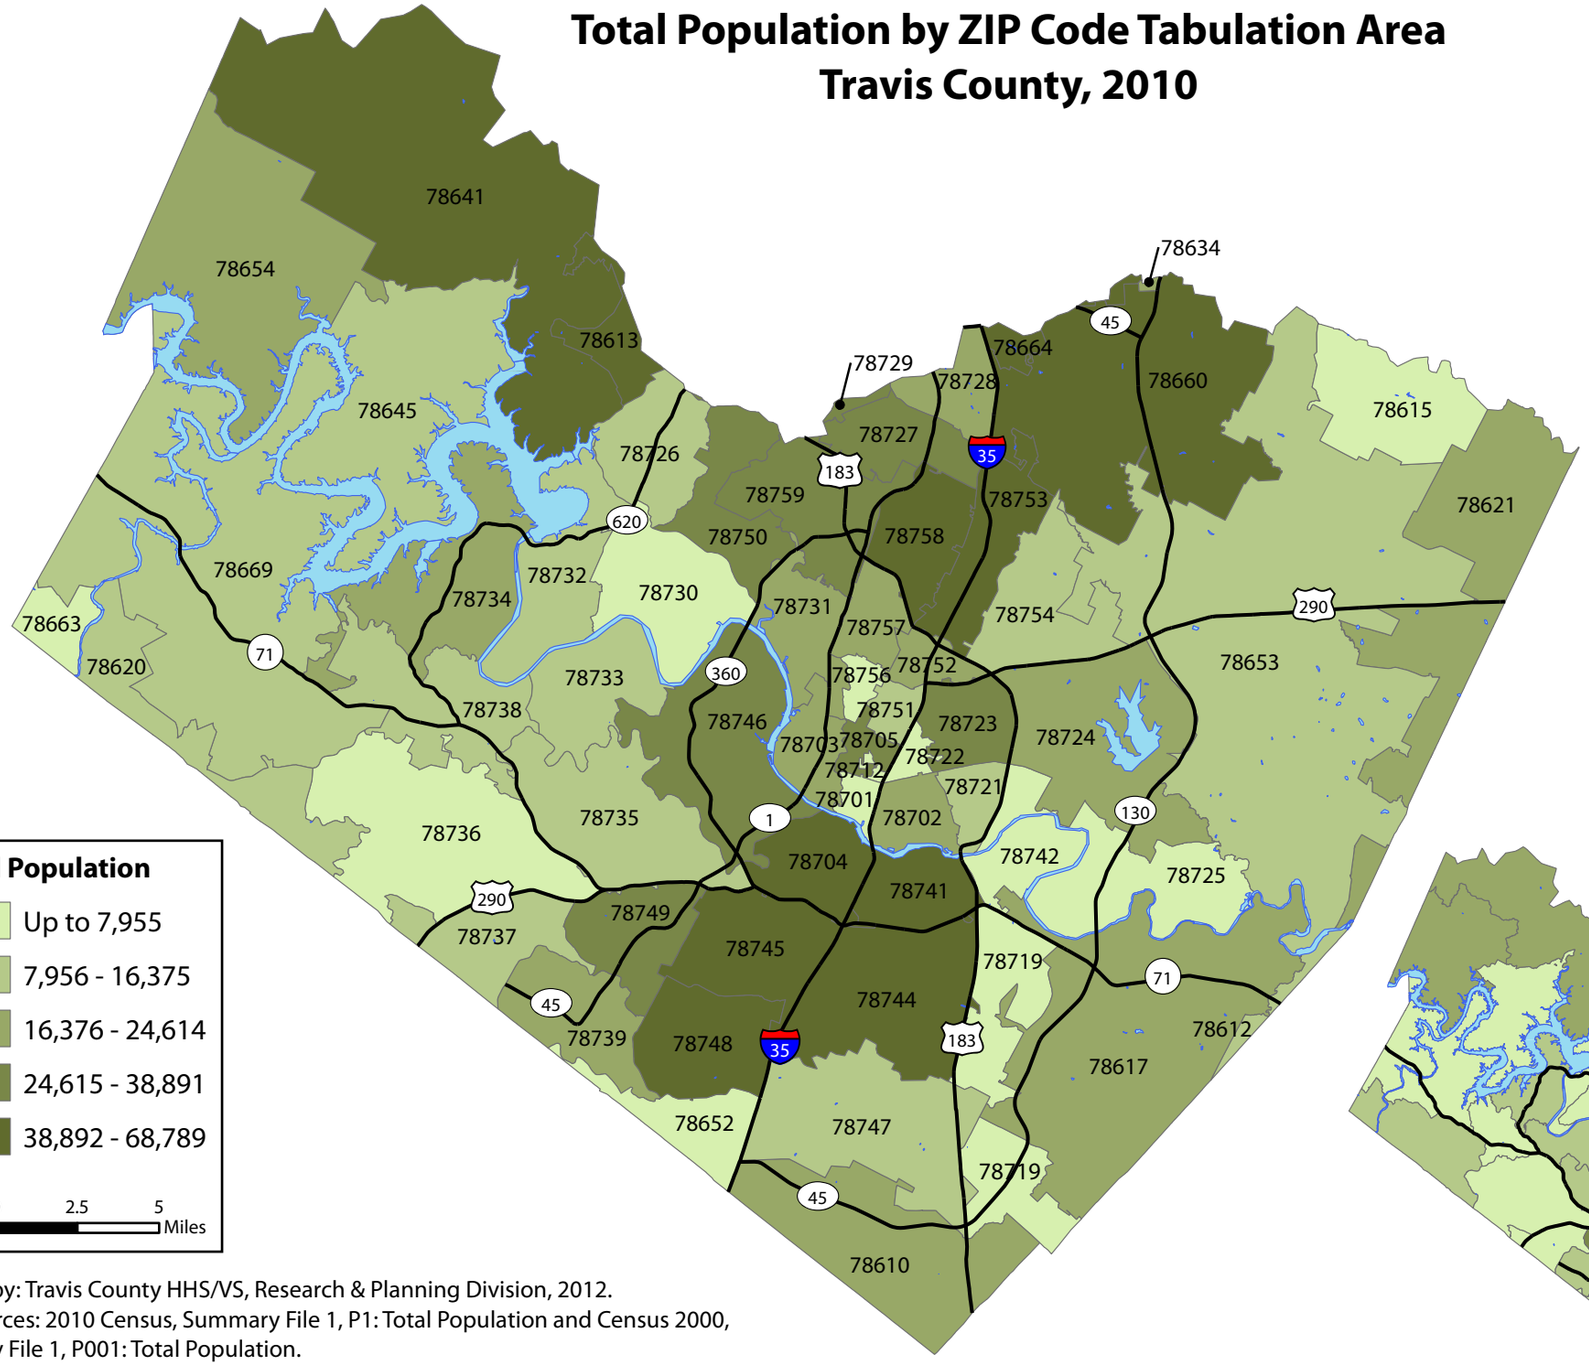

This map book was created by the staff at the Travis County Department of Health and Human Services & Veterans Service, Research & Planning Division. Lead authors were Rachel Coff, Korey Darling, and Courtney Bissonnet Lucas, with the support of Blanca Tapia Leahy (Division Director) and Sherri E. Fleming (County Executive for Travis County HHS/VS).

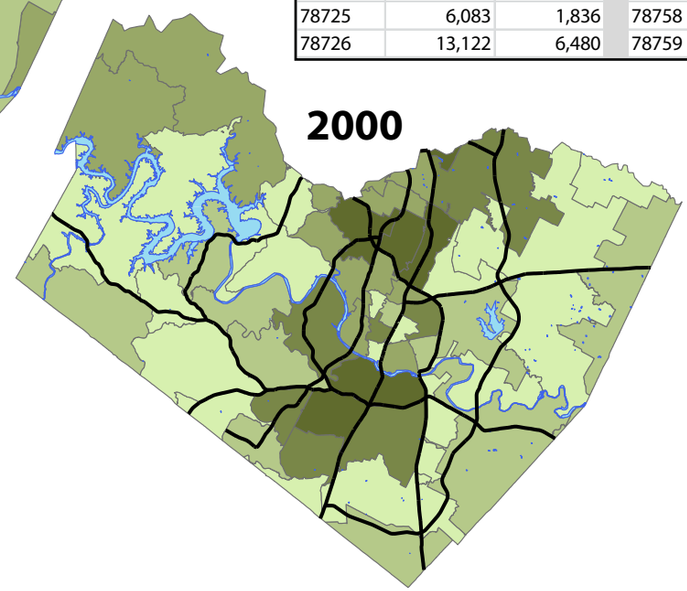

Questions or Comments?

For questions or for more information, please contact the Research & Planning Division at HHS_R&P@co.travis.tx.us.

Information on Decennial Census methodology and geographies is adapted from materials published by the U.S. Census Bureau and available online at www.census.gov.
